Mega Master Resume | QA Testing | Salesforce | AI Data | Automation | Documentation | Creative Technology

Delhi, India | princess.official2905@gmail.com | +91 9811139466 | [LinkedIn](#) | [Behance](#) | [Writings](#) | [Trailhead](#)

Profile Snapshot

Detail-oriented and multi-skilled B.Tech Mechanical & Automation Engineering graduate from IGDTUW, Delhi, with hands-on experience across software testing, Salesforce administration, CRM data governance, AI training-data projects, technical documentation, automation, content systems, and digital portfolio development.

This document is intentionally detailed. It is a master resume bank that can be shortened and tailored later for QA, Salesforce, AI data, business analyst, data operations, technical documentation, and content operations roles.

Open To Roles

- QA Tester / Manual Tester / Software Tester
- Salesforce Administrator / CRM Operations Associate
- Business Analyst / Junior Business Analyst / Process Analyst
- Data Operations / Data Quality Analyst / CRM Data Associate
- AI Data Evaluator / AI Training Data Specialist / Data Annotation QA
- Technical Documentation Executive / Documentation Specialist
- Content Operations / Creator Operations / Digital Content Associate
- IT Operations / Application Support / Product Operations Associate

Core Professional Positioning

- QA + product mindset: able to review user flows, detect issues, document bugs, and communicate problems clearly for developers and product teams.
- Salesforce + CRM operations foundation: hands-on internship exposure to Salesforce Lightning, SOQL, data import/export, reports, dashboards, workflow automation, and CRM data governance.
- AI data and automation exposure: created structured project concepts around AI image datasets, metadata thinking, automation workflows, prompt engineering, and AI-assisted productivity.
- Documentation and business systems: built client-ready documentation concepts for NGOs, advocates, freelancers, and content creators with clear templates, processes, and operating structures.
- Creative technologist profile: combines technical tools, research, design thinking, writing, storytelling, and portfolio presentation through Behance, blog pages, GitHub Pages, and HTML/CSS work.

Professional Experience

Tester Work - Software Tester

Aug 2025 - Present | Remote / Platform-Based Testing

- Participated in platform-based testing opportunities with a focus on manual testing, exploratory testing, usability review, and bug identification for digital products.
- Reviewed web and mobile user flows from an end-user perspective to detect UI issues, unclear journeys, broken flows, validation errors, functional inconsistencies, and device or browser-specific problems.
- Prepared structured bug reports with clear issue titles, testing environment details, reproduction steps, expected result, actual result, visual evidence, and severity/context notes.
- Performed checks similar to functional testing, regression checks, account-creation flow validation, form validation, localization review, onboarding flow review, payment/user journey validation, and cross-device sanity testing.
- Strengthened QA thinking by repeatedly observing how small UI, copy, logic, and flow issues can affect customer trust, task completion, and product usability.
- Practiced tester-style communication by writing concise, developer-friendly observations rather than vague feedback, helping bugs become easier to reproduce and resolve.
- Built a practical understanding of how crowdtesting and platform-based QA tasks are structured, reviewed, submitted, and evaluated.

Skills used: Manual Testing, Exploratory Testing, Regression Testing, Bug Reporting, Test Case Thinking, UI/UX Review, Cross-Browser Testing, Cross-Device Testing, Screenshot Documentation, Screen Recording, QA Communication

Links / proof placeholders: Tester Work Profile / Proof: [ADD TESTER WORK PROFILE OR PROJECT PROOF LINK]

Independent Freelance & Portfolio Projects - AI, QA, Automation, Documentation & Content Systems

Aug 2025 - Present | Remote / Self-Directed / Freelance-Style Work

- Built a broad portfolio of self-directed and client-ready digital systems to fill the post-internship transition phase with practical, demonstrable work across AI data, QA, automation, documentation, content, and outreach operations.
- Created AI training-data style workflows involving scene-object image sets, object-environment interactions, quality checks, metadata thinking, and visual consistency review for AI model learning use cases.
- Explored GitHub issue workflows, bug-fixing research, open-source contribution preparation, Algora-style bounty discovery, bug bounty reading, repository navigation, and pull-request expectation analysis.
- Designed a personal trading assistant bot concept with logic for intraday scanning, breakout filtering, ranked candidate cycles, risk-reward calculations, quantity sizing, alert formatting, email notifications, and documentation for future setup.
- Created client-ready documentation systems for NGOs, advocates, freelancers, and content creators, focusing on practical templates, repeatable workflows, operating checklists, outreach scripts, content systems, and organized file structures.
- Practiced lead-generation and outreach workflows using LinkedIn search, Apollo, Prospeo, Reoon-style email verification, Google Sheets, buyer research, segmentation, and cold email drafting.
- Used AI tools as productivity collaborators for research, drafting, coding guidance, documentation structure, naming, copywriting, QA thinking, and portfolio presentation while keeping the final work grounded and editable.
- Organized work for future portfolio display using links, screenshots, HTML pages, PDFs, project previews, Behance design references, writing pages, and GitHub Pages deployment planning.

Skills used: AI Data Workflows, Technical Documentation, GitHub Research, Bug Reproduction Thinking, Python, HTML, CSS, JavaScript, Codex, ChatGPT, Claude, Gemini, Prospeo, Apollo, Reoon, VirusTotal, Canva, Behance, Medium, GitHub Pages

Keysight Technologies International India Pvt. Ltd. - IT Intern, Global IT Services

Jan 2025 - Jul 2025 | Gurugram, Haryana, India

- Supported Salesforce and CRM-related workflows within global IT service operations, with focus on data quality, workflow efficiency, reporting support, and user-facing CRM reliability.
- Worked with Salesforce import/export files, helping clean, validate, and optimize datasets before submission to improve consistency and reduce avoidable data errors.
- Assisted in automating Salesforce workflows and improving ticket-resolution support processes through better CRM data handling and structured tracking.
- Developed and reviewed SOQL queries to support custom reporting, dashboard preparation, and data visibility for business and technical teams.
- Contributed to CRM data governance improvements and master data optimization, including reduction of duplicate or redundant records through systematic review.
- Performed regression and functional testing in Salesforce Lightning, validating behavior after configuration or data updates and documenting issues with detailed logs.

- Filed detailed bug and observation reports to help developers/admin teams understand errors, reproduce issues, and improve overall CRM reliability.
- Collaborated with CMD and KTAS AE teams on master data improvement initiatives, learning how enterprise technology teams coordinate across functions.

Skills used: Salesforce Lightning, SOQL, Reports & Dashboards, Data Loader, CRM Data Governance, Excel, Regression Testing, Functional Testing, Bug Reporting, Data Cleaning, Workflow Automation

Links / proof placeholders: [Salesforce Trailhead](#) | Internship Certificate: [ADD KEYSIGHT CERTIFICATE LINK]

Unessa Foundation - Crowdfunding & Fundraising Intern

Oct 2025 - Nov 2025 | Remote

- Supported crowdfunding campaign execution and outreach activities for a registered nonprofit, gaining practical exposure to nonprofit communication, campaign planning, and donor engagement.
- Assisted with donor-oriented communication, stakeholder engagement, and outreach messaging aligned with nonprofit goals and campaign sensitivity.
- Built understanding of fundraising workflows, donor relationship touchpoints, campaign trust-building, and clear social-impact storytelling.
- Applied writing and organization skills to support campaign communication and nonprofit operations in a structured manner.

Skills used: Fundraising, Outreach, Donor Communication, Campaign Support, Stakeholder Engagement, Email Writing, NGO Operations

Links / proof placeholders: Internship Proof / Certificate: [ADD UNESSA CERTIFICATE LINK]

Airports Authority of India - IT Intern, Aviation Systems & Data Automation

Aug 2024 - Sept 2024 | Delhi, India

- Supported AIMS-related aviation information workflows and gained exposure to operational IT systems used in aviation and government environments.
- Assisted in data automation activities for import/export, reporting, and structured information handling.
- Contributed to Government eMarketplace-related initiatives, learning how transparent procurement and structured digital records support government operations.
- Gained exposure to air traffic protocols, system discipline, data privacy requirements, and documentation expectations in a high-responsibility public sector environment.

Skills used: IT Operations, Data Automation, Reporting, Government IT Systems, AIMS Exposure, Data Privacy, Excel, Process Documentation

Links / proof placeholders: Internship Certificate: [ADD AAI CERTIFICATE LINK]

IGDTUW / Robolution Society - IoT & Automation Intern

Jun 2024 - Jul 2024 | Delhi, India

- Built a smart home automation system using NodeMCU ESP8266 integrated with Alexa and Google Assistant for voice-controlled appliance workflows.
- Integrated Sinric Pro API to enable Wi-Fi-based control and multi-device management for smart automation use cases.
- Designed relay control circuits, Wi-Fi configuration logic, and input signal stabilization for reliable device switching.
- Strengthened hardware-software integration skills by connecting embedded systems, cloud-based APIs, and end-user voice control.

Skills used: IoT, NodeMCU ESP8266, Arduino IDE, Sinric Pro API, Relay Circuits, Wi-Fi Configuration, Google Assistant, Alexa, Automation

Links / proof placeholders: Project HTML / Demo: [ADD SMART HOME HTML DISPLAY LINK] | Certificate: [ADD CERTIFICATE LINK]

STEAMEDU Learning Pvt. Ltd. - AR/VR Development Intern

Jun 2023 - Jul 2023 | Remote / Project-Based

- Developed immersive VR environments using Unity and WebVR/A-Frame, with focus on interactive scene construction and real-time performance.
- Created simulation concepts including cityscape exploration and emergency airplane landing/parachute deployment training experiences.
- Optimized 3D rendering and object placement for smoother real-time immersive experiences.
- Built comfort with simulation design, scene navigation, 3D environment logic, and user immersion considerations.

Skills used: Unity, A-Frame, WebVR, AR/VR Development, 3D Environments, Simulation Design, Rendering Optimization

Links / proof placeholders: VR Project HTML / Demo: [ADD VR PROJECT HTML LINK] | Certificate: [ADD STEAMEDU CERTIFICATE LINK]

ANH - A New Hope - Mechanical Design & Simulation Intern

Jun 2022 - Jul 2022 | Project-Based

- Designed 3D mechanical models and assemblies using Creo and SolidWorks for engineering design practice and visualization.
- Performed structural stress and deformation analysis using Ansys APDL to understand material behavior and design performance.

Princess | Mega Master Resume | Prepared as an editable master bank for targeted job applications

- Practiced tolerance analysis, material behavior simulation, and design optimization for mechanical structures.
- Built early foundation in technical modeling, engineering simulation, analytical problem-solving, and detail-oriented design review.

Skills used: Creo, SolidWorks, Ansys APDL, CAD, CAE, Structural Analysis, Mechanical Design, Simulation

Links / proof placeholders: Mechanical Project / Simulation File: [ADD DESIGN/SIMULATION LINK] | Certificate: [ADD ANH CERTIFICATE LINK]

Expanded Freelance & Portfolio Project Details

Use this section as a detailed bank of honest, role-tailorable bullet points for the freelance/career-gap period. For final job applications, select only the most relevant subsections and remove anything unrelated to the job description.

AI Training Data & Image Collection Projects

Category: AI data / visual QA / structured dataset preparation

Self-directed / client-ready portfolio work created to demonstrate practical ability, structured thinking, digital operations, documentation, AI-assisted workflows, and proof-of-work presentation.

Typical deliverables / work included:

- Prepared structured visual data concepts where each dataset set could include a base scene, isolated object images, and a final scene with objects naturally integrated into the environment.
- Worked with requirements such as natural environments, clean backgrounds, clear object visibility, non-blurry images, consistent camera position, indoor/outdoor diversity, and object or human placement context.
- Created data-quality thinking around scene consistency, object category clarity, image usability, naming conventions, folder structures, review readiness, and metadata notes.
- Understood how image datasets can support text-to-image, image editing, object placement, and multimodal AI training workflows.
- Prepared link-ready project descriptions for future portfolio display, including sample previews, dataset structure screenshots, and evidence placeholders.

Tools / skills: AI Training Data, Image Dataset Preparation, Visual QA, Metadata Writing, Object-Scene Mapping, Data Organization, Google Drive, Google Forms, Image Quality Review

Link placeholders: AI dataset sample preview: [ADD LINK] | Image-set folder: [ADD LINK] | Project brief/proof: [ADD LINK]

Bug Fixing, GitHub PR & Bounty Platform Research

Category: QA research / developer workflow / open-source contribution preparation

Self-directed / client-ready portfolio work created to demonstrate practical ability, structured thinking, digital operations, documentation, AI-assisted workflows, and proof-of-work presentation.

Typical deliverables / work included:

- Studied GitHub repositories, issues, pull requests, labels, contribution guidelines, and issue descriptions to understand how developers communicate bug fixes and enhancements.
- Explored Algora-style bounty platforms, bug bounty boards, and open-source issue workflows to identify beginner-friendly contribution opportunities.
- Practiced breaking down a bug into reproduction steps, suspected files, expected behavior, actual behavior, logs/screenshots needed, and proposed fix direction.
- Used AI coding assistants carefully for repository understanding, error explanation, patch planning, and safer code-change review without blindly claiming production-level ownership.
- Built a foundation for roles requiring QA mindset, debugging curiosity, technical reading, and issue documentation.

Tools / skills: GitHub, Pull Requests, Issue Triage, Bug Reproduction, Debugging, Codex, GitHub Copilot, Python, JavaScript, HTML, CSS, VirusTotal, CLI Basics

Link placeholders: GitHub issues studied: [ADD LINK] | PR/sample patch: [ADD LINK] | Bug bounty notes: [ADD LINK]

Trading Assistant Bot & Market Automation Workflows

Category: Python automation / market scanning logic / alert workflows

Self-directed / client-ready portfolio work created to demonstrate practical ability, structured thinking, digital operations, documentation, AI-assisted workflows, and proof-of-work presentation.

Typical deliverables / work included:

- Planned and refined a personal trading assistant workflow to help screen intraday stock candidates, rank opportunities, calculate quantity sizing, and generate structured alerts.
- Designed logic around breakout levels, volume confirmation, gap filters, EMA stacking, R1/R2 references, ranked candidate cycles, and post-market review prompts.
- Defined alert and notification requirements including loud cycle-start messages, email subjects, buy-alert formats, and separate logic sections to avoid disturbing existing strategy windows.
- Prepared detailed Codex prompts to update code modules such as strategy, reporting, runtime windows, telemetry, storage, configuration, and CLI usage while preserving existing behavior.

- Documented setup thinking around API inputs, Gmail app password steps, monthly credential refresh, report generation, PowerShell commands, and future-device migration.

Tools / skills: Python, Codex, GitHub, PowerShell, CLI, Email Notifications, CSV Reports, Strategy Logic, Risk-Reward, Automation Documentation

Link placeholders: Bot repo/private proof: [ADD LINK] | Bot documentation PDF: [ADD LINK] | Screenshots/alerts: [ADD LINK]

NGO Operations Helpkit & Documentation System

Category: Nonprofit operations / templates / policy and process documentation

Self-directed / client-ready portfolio work created to demonstrate practical ability, structured thinking, digital operations, documentation, AI-assisted workflows, and proof-of-work presentation.

Typical deliverables / work included:

- Created a structured documentation system concept for nonprofit teams needing practical operating files rather than blank templates.
- Covered modules such as governance, board documents, HR, volunteer systems, finance policies, fundraising, grant tracking, program planning, monitoring and evaluation, compliance, partnerships, risk, communications, and technology/data privacy.
- Designed the system with an Indian nonprofit context in mind, making content easier for founders, directors, CSR teams, program managers, and fundraising teams to adapt.
- Prepared buyer-facing language, preview strategy, folder structure, module descriptions, and outreach positioning for nonprofit decision-makers.
- Built reusable document structures suitable for PDFs, editable Word files, Google Docs, and portfolio case-study presentation.

Tools / skills: Technical Documentation, SOP Design, NGO Research, Policy Drafting, Template Design, Process Mapping, Google Docs, MS Word, PDF Formatting, Fundraising Support

Link placeholders: NGO toolkit preview: [ADD LINK] | Module index: [ADD LINK] | Sample PDF: [ADD LINK]

Advocate Documentation & Legal Practice Support Pack

Category: Legal-admin documentation / checklist systems / client workflow support

Self-directed / client-ready portfolio work created to demonstrate practical ability, structured thinking, digital operations, documentation, AI-assisted workflows, and proof-of-work presentation.

Typical deliverables / work included:

- Created a client-ready documentation pack concept for advocates and small legal offices to organize repeatable admin workflows and case-related records.
- Included formats for client intake, matter tracking, hearing notes, document checklists, follow-up logs, invoice records, internal reference notes, and communication templates.
- Added responsible-use disclaimers such as "for reference only; kindly recheck before official use" to position the pack ethically and avoid representing it as legal advice.
- Focused on improving consistency, searchability, and time-saving in everyday legal office documentation.
- Built a structure that can be displayed as a portfolio case study with screenshots, file previews, and module explanations.

Tools / skills: Legal Documentation Support, Checklist Design, Client Intake Formats, Professional Writing, Risk-Aware Drafting, MS Word, PDF Formatting, Content Organization

Link placeholders: Advocate pack preview: [ADD LINK] | Disclaimer sample: [ADD LINK] | File index: [ADD LINK]

Freelancer Toolkit & Service Operations Pack

Category: Freelance operations / client communication / lead generation support

Self-directed / client-ready portfolio work created to demonstrate practical ability, structured thinking, digital operations, documentation, AI-assisted workflows, and proof-of-work presentation.

Typical deliverables / work included:

- Created a practical toolkit concept for freelancers to manage service delivery, onboarding, pricing, project tracking, revision handling, invoice follow-ups, testimonials, and portfolio organization.
- Designed client-facing files such as service menus, proposal formats, onboarding questionnaires, delivery checklists, revision trackers, invoice templates, and testimonial request templates.
- Built supporting systems for lead research, buyer filtering, outreach sequencing, email verification, and service-packaging ideas.
- Practiced positioning freelance services around clarity, trust, repeatable delivery, and operational professionalism.
- Used the project to demonstrate documentation, business process, content, CRM thinking, and outreach skills together.

Tools / skills: Freelance Operations, Client Communication, Proposal Writing, Lead Generation, Prospeo, Apollo, Reoon, LinkedIn Research, Google Sheets, Email Outreach

Link placeholders: Freelancer toolkit preview: [ADD LINK] | Lead gen sample: [ADD LINK] | Email templates: [ADD LINK]

Content Creator Toolkit for Posts, Carousels & Storytelling

Category: Content operations / writing systems / creator workflow design

Self-directed / client-ready portfolio work created to demonstrate practical ability, structured thinking, digital operations, documentation, AI-assisted workflows, and proof-of-work presentation.

Typical deliverables / work included:

- Created a content system for creators, bloggers, and personal brands to plan posts, carousels, captions, storytime scripts, quote content, and repurposed ideas.
- Built frameworks for turning one idea into multiple formats such as Instagram carousel slides, reel hooks, blog sections, captions, newsletter-style content, and story-driven posts.
- Focused on voice, emotional clarity, visual direction, content consistency, and platform-ready formatting.
- Created HTML/blog-style writing pages and planned portfolio display of writing work with auto-scrolling sections, editorial cards, and link previews.
- Used the system to combine copywriting, design direction, brand voice, content planning, and web presentation skills.

Tools / skills: Content Strategy, Copywriting, Storytelling, Carousel Planning, Blog Writing, Caption Writing, Canva, Behance, Medium, HTML, CSS, GitHub Pages

Link placeholders: Writing gallery: princessofficial2905.github.io/Writings/ | Creator toolkit preview: [ADD LINK] | Carousel samples: [ADD LINK]

Selected Projects - Detailed Project Bank

AI Scene & Object Image Dataset Project

Category: AI Data / Visual QA

Structured dataset-style project for AI model training use cases involving base scenes, object images, final scene integration, and quality review.

Typical deliverables / work included:

- Designed image-set structure using base environment, isolated object images, and final integrated scene references.
- Applied visual QA rules such as clarity, lighting, object visibility, background cleanliness, and environment diversity.
- Prepared metadata-style notes and folder organization so datasets could be reviewed and submitted systematically.
- Positioned the project for AI image generation, image editing, and object-scene understanding workflows.

Tools / skills: AI Training Data, Image QA, Metadata, Google Drive, Visual Review

Link placeholders: Sample folder: [ADD LINK] | Project proof: [ADD LINK]

Personal Trading Assistant Bot

Category: Python Automation / Trading Workflow

Personal automation project designed to assist with intraday candidate filtering, alerting, quantity sizing, and risk-reward calculation.

Typical deliverables / work included:

- Defined scanning logic around breakout levels, volume checks, gap filters, R1/R2 references, EMA conditions, and ranked candidate cycles.
- Prepared Codex prompts to implement features carefully across modules without breaking existing strategy logic.
- Designed notification behavior such as loud ranked-cycle voice alerts, email alerts, and structured buy-alert formats.
- Created documentation requirements for future setup, API credential handling, Gmail app password workflow, and PowerShell commands.

Tools / skills: Python, Codex, GitHub, PowerShell, Email Alerts, CSV Reports

Link placeholders: Repo: [ADD PRIVATE/PUBLIC LINK] | Documentation: [ADD LINK]

NGO Operations Documentation System

Category: Documentation / Nonprofit Operations

Client-ready documentation framework designed to help nonprofit teams organize governance, HR, finance, programs, fundraising, and compliance.

Typical deliverables / work included:

- Mapped nonprofit operations into organized modules with editable templates and matching PDF-style deliverables.
- Created practical formats for governance, volunteer management, fundraising, grant tracking, program planning, reporting, partnerships, and risk.
- Prepared buyer-facing preview and outreach positioning for NGO decision-makers.
- Designed for clarity, sequence, usability, and adaptation by small teams.

Tools / skills: SOPs, Policy Drafting, Template Design, MS Word, PDF, Google Docs

Link placeholders: Preview: [ADD LINK] | File index: [ADD LINK]

Advocate Documentation Support Pack

Category: Legal Admin / Documentation

Professional documentation pack concept for advocates and small legal offices to organize repeatable client and case workflows.

Typical deliverables / work included:

- Created templates for client intake, matter tracking, hearing notes, document checklists, invoice records, follow-ups, and internal references.
- Included responsible-use disclaimers to avoid positioning the content as legal advice.
- Focused on reducing admin friction and making everyday legal documentation easier to reuse.
- Prepared the pack for PDF, editable document, and portfolio case-study display.

Tools / skills: Legal Admin, Templates, Checklists, MS Word, PDF Formatting, Risk-Aware Writing

Link placeholders: Preview: [ADD LINK]

Freelancer Operations Toolkit

Category: Operations / Service Delivery

System for freelancers to manage client onboarding, service menus, proposals, delivery checklists, revisions, invoices, and testimonials.

Typical deliverables / work included:

- Created client-facing and internal documents to make freelance service delivery more organized and professional.
- Added outreach and lead-generation thinking using LinkedIn, Prospeo, Apollo, Reoon, and Google Sheets.
- Built a workflow that combines documentation, CRM thinking, client communication, and service packaging.
- Prepared sample files for portfolio proof-of-work display.

Tools / skills: Client Ops, Proposal Writing, Lead Gen, Prospeo, Apollo, Reoon, Google Sheets

Link placeholders: Preview: [ADD LINK]

Creator Content Planning Toolkit

Category: Content Operations / Storytelling

Content system for creators, bloggers, and personal brands to plan carousels, captions, storytime posts, emotional essays, and repurposed content.

Typical deliverables / work included:

- Created frameworks for hooks, captions, carousel structures, blog outlines, story posts, and reusable content calendars.
- Focused on emotional resonance, clear structure, platform-friendly writing, and visual direction.
- Planned portfolio display using auto-scrolling writing cards and HTML page previews.
- Connected writing, design, content strategy, and web presentation skills.

Tools / skills: Copywriting, Storytelling, Canva, Behance, Medium, HTML, CSS

Link placeholders: Writing site: princessofficial2905.github.io/Writings/ | Samples: [ADD LINK]

Smart Home Automation using NodeMCU

Category: IoT / Automation

Voice-controlled smart home automation project using NodeMCU ESP8266 with Alexa and Google Assistant integration.

Typical deliverables / work included:

- Built appliance-control workflow using NodeMCU ESP8266 and Wi-Fi-based device communication.
- Integrated Sinric Pro API for smart control and multi-device management.
- Designed relay control circuit and handled Wi-Fi setup and input signal stabilization.
- Converted engineering learning into a practical automation prototype.

Tools / skills: NodeMCU, Arduino IDE, Sinric Pro API, Alexa, Google Assistant, IoT

Link placeholders: HTML demo: [ADD LINK] | Certificate: [ADD LINK]

Parachute Opening Simulation in Emergency Airplane Crash Landing

Category: AR/VR / Simulation

Immersive VR simulation concept using Unity and A-Frame for emergency landing and parachute deployment training.

Typical deliverables / work included:

- Created interactive VR environment with scene construction, object placement, and simulation flow.
- Used Unity and WebVR/A-Frame to develop immersive training-style experiences.
- Optimized rendering and interaction for real-time user experience.
- Built foundation in simulation design and 3D content workflows.

Tools / skills: Unity, A-Frame, WebVR, 3D Simulation, VR

Link placeholders: HTML demo: [ADD LINK]

Hybrid Composite Materials Research

Category: Engineering / Simulation

Research project focused on hybrid composite materials using banana fiber, carbon fiber, ZnO, epoxy, theoretical models, and FEA.

Typical deliverables / work included:

- Worked on design and simulation thinking for banana-carbon fiber reinforced ZnO-epoxy composites.
- Applied theoretical modeling concepts and FEA-based analysis using Ansys APDL.
- Prepared research-oriented technical understanding around materials, stress, durability, and composite behavior.

- Research paper accepted at ICRCET 2025 for Scopus/WoS publication pathway as per profile.

Tools / skills: Ansys APDL, FEA, Composite Materials, Research Writing, Mechanical Simulation

Link placeholders: Paper/certificate: [ADD LINK]

Technical Skills Matrix

QA & Testing

Manual Testing	Exploratory Testing	Regression Testing
Functional Testing	Usability Testing	Cross-Browser Testing
Cross-Device Testing	Bug Reporting	Test Case Writing
Issue Reproduction	Screenshot Evidence	Screen Recording
UI/UX Feedback	QA Documentation	Localization Review
Payment Flow Validation	Form Validation	

Salesforce & CRM

Salesforce Lightning	Reports & Dashboards	Workflow Rules
Process Builder	Data Loader	Validation Rules
SOQL	CRM Data Governance	User Roles & Profiles
Lead & Opportunity Management	Sandbox Testing	Data Import/Export
CRM Automation	Master Data Optimization	Ticket Workflow Support

Programming, Web & Automation

Python	JavaScript	Java Basics
HTML	CSS	GitHub
GitHub Pages	GitHub Issues	Pull Requests
CLI Basics	PowerShell	Replit
VS Code	Codex-Assisted Development	CSV Reports

Education

Indira Gandhi Delhi Technical University for Women, Delhi

B.Tech in Mechanical and Automation Engineering | 2021 - 2025 | CGPA: 7.66 / 10

- Built interdisciplinary foundation across mechanical systems, automation, design, simulation, programming-adjacent workflows, IoT, and engineering problem-solving.
- Completed technical projects and internships spanning CAD/CAE, AR/VR, IoT automation, aviation IT, and enterprise Salesforce/CRM operations.

Skills used: Mechanical & Automation Engineering, CAD/CAE, Automation, Research, Simulation, Technical Projects

N.C. Jindal Public School, Delhi

CBSE

- Class XII: 87.6% | 2021
- Class X: 88.6% | 2019

Skills used: Academic Discipline, Communication, Analytical Foundation

Certifications & Credentials

- Salesforce Trailhead - 227+ badges / Double Star Ranger
- Python: Beyond the Basics
- Excel Training
- Emotional Intelligence in the Workplace
- Fundraising Internship
- Explore Engineering Job Simulation
- Lean Six Sigma & Quality Management
- Business Analysis & Process Improvement
- Digital Marketing & SEO
- [ADD CERTIFICATE: Manual Testing / QA if available]
- [ADD CERTIFICATE: Salesforce Admin if available]
- [ADD CERTIFICATE: AI / Data Annotation if available]

Certificate links / proof folder: [ADD CERTIFICATES FOLDER LINK]

Achievements & Highlights

- Salesforce Trailhead: 227+ badges and Double Star Ranger status as listed on current profile.
- Research paper accepted at ICR CET 2025 for Scopus/WoS publication pathway on hybrid composite materials.
- Keysight Technologies internship experience in Salesforce, CRM data quality, workflow automation, SOQL, testing, and master data optimization.
- Built smart home automation prototype using NodeMCU ESP8266 with Alexa and Google Assistant integration.
- Created immersive VR simulation concepts using Unity and WebVR/A-Frame.
- Built a growing portfolio across writing, design, content systems, documentation packs, AI data workflows, QA testing, and automation logic.

Business Process	User Journey	Checklist Design
Reporting	Knowledge Base	Client Documentation

Content / Creative Operations Keywords

Content Strategy	Copywriting	Storytelling
Blog Writing	Caption Writing	Content Calendar
Carousel Planning	Brand Voice	Creative Direction
Portfolio Design	HTML Pages	GitHub Pages
Behance	Medium	Canva

Tailoring Guide - How To Convert This Master Resume Into Targeted Versions

QA Tester Resume

Keep Tester Work, Keysight testing bullets, bug-fixing/GitHub research, QA skills, cross-browser/device testing, test-case thinking, bug reporting, screenshots, reproduction steps. Remove heavy creative/content parts unless the role values UI/UX feedback.

Salesforce Admin Resume

Lead with Keysight, Trailhead, SOQL, Data Loader, reports, dashboards, workflow automation, CRM data quality, data import/export, validation rules, user/profile management, and Salesforce testing. Keep freelance automation only as supporting digital skill.

AI Data Evaluator Resume

Lead with AI image dataset work, visual QA, metadata, image quality review, structured datasets, prompt engineering, AI tools, and data quality. Mention Tester Work for quality-review mindset.

Business Analyst / Operations Resume

Lead with process mapping, documentation systems, CRM data governance, stakeholder communication, NGO/freelancer documentation systems, reporting, templates, and workflow design.

Technical Documentation Resume

Lead with NGO, advocate, freelancer, creator toolkits, SOPs, templates, policies, checklists, process documentation, PDF/Word deliverables, and clear communication.

Content Operations Resume

Lead with creator toolkit, writing/blog HTML files, Behance, Medium, carousel planning, copywriting, content calendars, storytelling, brand voice, and AI writing workflows.

Interview-Friendly Explanation for Freelance / Portfolio Phase

Use this explanation when asked about the career gap or freelance period:

After my internship phase, I used the transition period to build practical portfolio projects instead of leaving the time empty. I worked on platform-based testing through Tester Work, explored QA and bug-fixing workflows through GitHub and bounty-style platforms, and created several client-ready documentation systems for NGOs, advocates, freelancers, and content creators. I also worked on AI training-data style projects and automation logic for a personal trading assistant bot. Some of these were self-directed and portfolio-based, but they helped me build useful skills in documentation, QA thinking, AI tools, CRM/data workflows, and structured problem-solving. Now I am looking to apply those skills in a more stable full-time role.

Role-Specific Professional Summary Options

QA Tester Summary

Detail-oriented software testing candidate with platform-based testing exposure through Tester Work and Salesforce functional/regression testing experience from Keysight Technologies. Skilled in manual testing, exploratory testing, bug reporting, reproduction steps, UI/UX review, cross-browser checks, and structured QA documentation.

Salesforce Admin Summary

Salesforce-focused technology graduate with hands-on internship experience in Salesforce Lightning, SOQL, Data Loader, reports, dashboards, CRM data governance, workflow automation, and Salesforce testing. Salesforce Trailhead Double Star Ranger with 227+ badges and strong interest in CRM operations and business process improvement.

AI Data Evaluation Summary

AI data and quality-review oriented candidate with self-directed experience in structured image dataset preparation, visual QA, metadata writing, object-scene mapping, and AI-assisted workflows. Comfortable using AI tools for research, drafting, quality review, and structured project organization.

Documentation Specialist Summary

Documentation-focused creative technologist with experience building client-ready systems for NGO operations, legal-admin workflows, freelancer operations, and creator content planning. Strong in SOPs, templates, checklists, process mapping, professional writing, PDF/Word formatting, and information organization.

Final Notes for Future Editing

- For a real job application, shorten this master resume to 1-2 pages and keep only role-relevant sections.
- Keep the phrase "Independent Freelance & Portfolio Projects" for unsold or self-directed work. It is honest and professional.
- Avoid claiming paid clients, revenue, employment, or expert status unless there is proof.

- Use links, screenshots, certificates, and project previews to make the portfolio feel credible.
- Keep the tool claim honest: "Tools I have used, explored, or built workflows around."
- For recruiters, place the strongest matching experience at the top based on the role: Tester Work for QA, Keysight for Salesforce, AI dataset for AI data, documentation packs for documentation/business operations roles.
